

Virginia Fish Stocking Authorization

(to stock fish in Virginia inland waters pursuant to 4VAC 15-320-60)

Virginia regulation (4VAC 15-320-60) requires authorization from the Department to stock any species of fish into inland waters of the state. This regulation, however, does not restrict stocking of native fish species into privately owned ponds. The purpose of this authorization requirement is to protect native populations of fish, to control spread of fish diseases, and to avoid establishment of exotic fish populations in streams where such species would be undesirable.

Enclosed is a authorization application. You are required to give the name of the supplier from whom you will be purchasing fish. When describing the section of stream to be stocked, please provide reliable landmarks (such as state highway crossings) that can be easily identified by Department staff. You are also required to provide a location map. For best results, use a copy of a USGS topographic map or a county Highway Department map. **DO NOT** write on the lines **AUTHORIZATION NO. AND EXPIRATION**.

When issued, this authorization will be good only for the stockings indicated on the application. In addition, an expiration date will be given, after which time, another authorization will be required. Any changes in the conditions listed on the authorization will require review by the biologist. The approved authorization must be available for inspection at the time of stocking.

The authorization will generally be processed within 15 days of receipt. Please forward the enclosed application or any inquiries to the appropriate Regional Fisheries Managers Office.

Authorization No. _____

Expiration Date: _____

Virginia Fish Stocking Authorization
(to stock fish in Virginia inland waters pursuant to 4VAC 15-320-60)

Name/Address of Applicant:
